The cumulative distribution function of the negative binomial distribution with parameters r and p is given by

$$F(t) = \begin{cases} 0, & \text{if } t < r \\ \sum_{x=r}^{[t]} f(x) = \sum_{x=r}^{[t]} {x-1 \choose r-1} p^r q^{x-r}, & \text{if } t \ge r. \end{cases}$$

Plots of the probability function f(x) and the cumulative distribution function F(t) are presented in Figure 5.5 for some choices of r and p.

**Figure 5.5** The probability function (left) and the cumulative distribution function (right) of the negative binomial distribution for some choices of r and p.
